

# URL shortener in PHP + Shorten URLs management

---

## Use case

In any case, the user enters a long URL named **longUrl**, this is the redirect link.

Then, the two use cases are: (do not expire)

- The user wants to use an alias  
**longUrl** *https://www.google.com*  
**shortUrl** *https://www.avim.eu/googl*
- The user wants to use a random alias (can be expires)  
**longUrl** *https://www.google.com*  
**shortUrl** *https://www.avim.eu/e46dsh*
